

Demonstration of Proposed Features

Date	15 July 2006
Team ID	XXXX
Project Name	A Comprehensive Measure of Well-being
Maximum Marks	1 Mark

Demonstration of Proposed Features:

This document captures all the key features implemented in my project. It demonstrates how each feature contributes to achieving the objective of predicting the Human Development Index (HDI) accurately using Machine Learning and presenting the results through a user-friendly web application.

S.No	Feature Name	Description	Status (Implemented / Partial / Pending)	Demonstrated (Yes / No)	Remarks
1	User Input Form	Allows users to input development indicators such as Life Expectancy, Education, and Income.	Implemented	Yes	All input fields validated and working correctly.
2	Data Preprocessing	The input data is preprocessed using the same steps applied during model training (scaling and encoding if required).	Implemented	Yes	Ensures accurate prediction by maintaining data consistency.
3	HDI Prediction Using Linear Regression	Uses a trained Linear Regression model to predict the HDI value based on the user input.	Implemented	Yes	Model loaded successfully and returns accurate predictions.
4	Result Display	Displays the predicted HDI value along with interpretation (Low, Medium, High Human Development).	Implemented	Yes	Prediction result and interpretation shown clearly to the user.
5	Data Visualization	Shows visual representation of input factors and HDI prediction using bar charts and graphs.	Implemented	Yes	Graphs displayed correctly to improve user understanding.
6	Flask Web Application	Complete web application developed using Flask for seamless user interaction.	Implemented	Yes	End-to-end workflow tested and working successfully.

Feature Implementation Summary:

Total Features Proposed	6
Total Features Implemented	6
Total Features Demonstrated	6
Overall Implementation Rate (%)	100%
